Citrix Cloud Readiness Assessment

OVERVIEW

Citrix Cloud now enables their traditionally on-premises products and services, such as Citrix Virtual Apps and Desktops and secure access solutions via the NetScaler platform, to be hosted and delivered via public cloud. But, how do you get started in evaluating whether your organization is ready for Citrix Cloud? Or, which deployment method may be the right one for your organization? CloudWave's Cloud Readiness Assessment for Citrix examines your existing Citrix user workspace solution and operational state and provides the following:

Expert Consulting – CloudWave possesses the experience and expertise to evaluate your environment. We'll review and evaluate your existing Citrix workspace solution and will deliver the benefits, risks, and considerations in transitioning to Citrix Cloud.

Tailored Reporting – CloudWave will report all findings as well as provide knowledge transfer throughout the entire process to your team.

Key Benefits

· Significantly reduce the time and risk to assess, architect, and integrate Citrix Cloud

· Accelerate business qualification and enablement for adopting a cloud model for user workspace

· Identify use cases, costs, and benefits through an expert review of your Citrix environment

· Gain insight into Citrix Cloud for options available in deploying a hybrid or fully cloud hosted model

· Assess cost model options, including licensing, resource consumption of workloads, and contractual obligations

DELIVERABLES

The Cloud Readiness Assessment for Citrix examines your business requirements and applies these requirements to use cases for Citrix Cloud services. Moreover, we'll provide your organizations with options for moving your workloads into leading recognized cloud providers, such as Microsoft Azure or AWS. We'll also include a review of your current licensing arrangements – ensuring you have the right quantity of licenses for your move to the cloud – as well as an overview of common cloud transition hurdles and proven strategies for overcoming them.

CloudWave will explain how each service can deliver your user workspace and will provide the business impact and ROI analysis. We'll explore the practical aspects of administration and provisioning as well as delve into more complex topics, such as integration planning.

Upon completion of the assessment, you'll have a clearer understanding of the roadmap for your organization – from an IT and business perspective. Based on our business analysis, we'll make recommendations on how to make a Citrix Cloud adoption as effective as possible. At the end of this engagement, CloudWave will deliver a **Citrix Cloud Services Recommendation Report** and a **Citrix Cloud Readiness Report.**

SUMMARY

· Understand your starting point – Get an expert review of your workloads and licensing needs.

· Discover cloud leading practices – Learn common cloud optimizations and how to benefit from them

· Review IT Processes – Learn what is required to support a Citrix Cloud adoption

· Build a Cloud Readiness Report – Discover how Citrix products and services will simplify your journey to the cloud
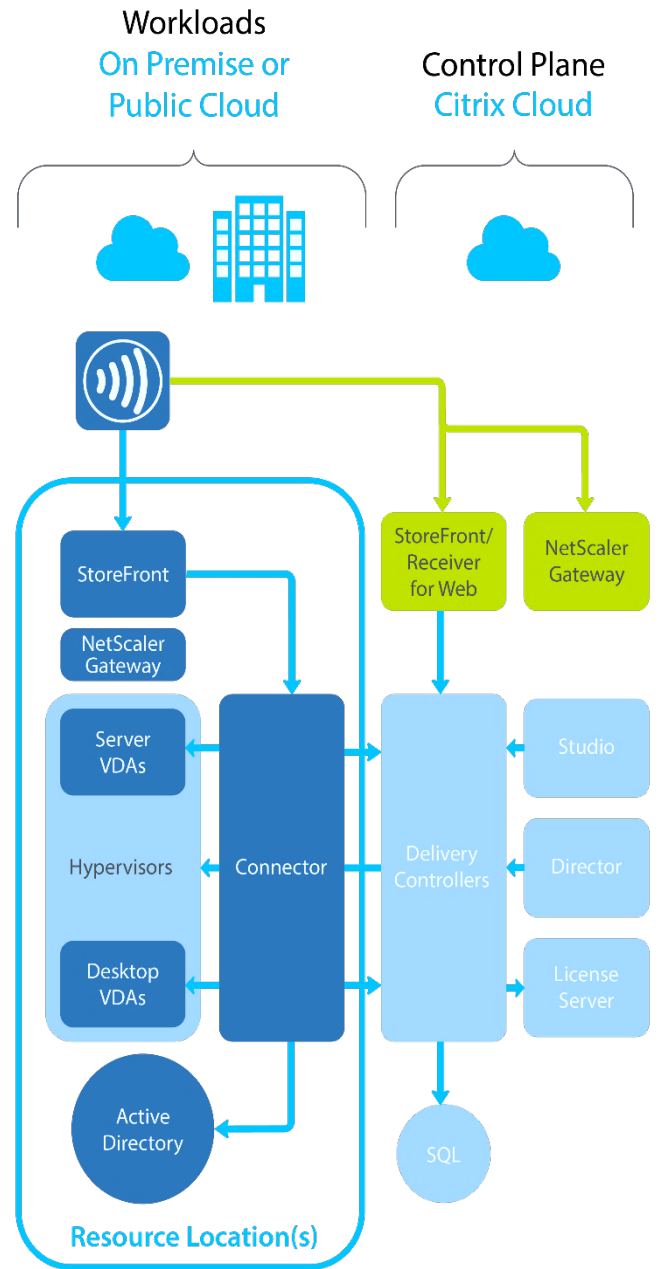

ABOUT US

We bring the cloud to healthcare.

CloudWave creates multi-cloud solutions for healthcare which bring together cloud edge on-premises customer data center resources, managed private cloud services in our OpSus Healthcare Cloud, and seamless federation with public cloud services like Office 365, Microsoft Azure, Google Cloud and AWS.

CloudWave's OpSus Healthcare Cloud services are built for healthcare and include hosting of over 125 healthcare applications, disaster recovery with auditable testing and data restoration, systems management, security, backup, and archiving services. CloudWave architects healthcare IT solutions with the goal of operational sustainability. Our engineers and consultants have extensive experience designing and implementing solutions for hospitals.

Whether you want to operate your IT systems in your data center, in the cloud, or a combination of both, CloudWave can help. We take a multi cloud approach to healthcare IT by helping hospitals architect, build, and integrate a personalized solution using managed private cloud, public cloud, and cloud edge resources.
